Ready

Web pages provided by the maintenance component 1A15 1A16 of the merchant computer 1A11 through the virtual component 1A13 on the VO computer 1A10. The merchant includes an order processing component 1A17 that provides directly to customer computers 1A01-1A04 via the network.

Detailed Description Text - DETX (9):

FIG. 1A shows a simple system that displays the invention. However, the invention may be employed on systems and network topologies. A much larger number than shown in FIG. 1A would be desirable, of course, of virtual outlets and merchants. Virtual outlets, need not reside on separate computers, but could reside on computers, provided that each has an Internet address on an intra-net computer network.

Detailed Description Text - DETX (10):

FIG. 1B illustrates the sequence of Web pages as In this example, the name of the VO is "AcmeCyberstore with lines; and it is offering to sell shirts, pants pants are sold through a merchant named "HaberDasher sold through a merchant named "MadHatter Company." Web page for the AcmeCyberstore, the customer would Web page contains banner 1B11 and logo 1B12, which i addition, this Web page contains the images 1B13, 1B products that are being offered for sale. When a cu purchase (or to view product information), the brows for the merchant that sells the product. The Web pa (i.e., hotlink) associated with that product. For e 1B13 may have the URL "http://www.HaberDasher.com/? AcmeCyberstore&AcmeCyberstore.com/home page&hat" associated with it. The portion "HaberDasher.com" identifies the merchant that sells the shirt, the portion "AcmeCyberstore" identifies the VO, and the portion "AcmeCyberstore.com/homepage" identifies the Web page to return to after the sale is complete. (If a return Web page is not identified, the merchant can use a default return Web page for that virtual outlet.) When the merchant computer 1A11 for the HaberDasher Company receives this URL, it accesses a database established when the AcmeCyberstore established a virtual outlet relationship with the HaberDasher Company. That database specifies a Web page layout that is preferably a layout similar to that of the Web page for the AcmeCyberstore. For example, the layout may indicate the contents of the banner, logo, and background color of the Web page. The merchant computer 1A11 then dynamically creates a Web page (e.g., an HTML file) in accordance with the layout and associates the return URL with an icon on the Web page. The merchant computer 1A11 then sends that Web page to the customer computer 1A01-1A04. The customer computer 1A01-1A04 displays the merchant Web page 1B20, 1B30. The merchant Web page may allow the representative to browse through various other Web pages to collect information (e.g., delivery address or credit card number) relating to the purchase. When the customer has completed the purchase, the customer can select the return icon to return to the Web page 1B40 for the AcmeCyberstore VO.

(57) **ABSTRACT**

An apparatus, computer-implemented method and product to arrange and fund a funeral or other memorial service. A program receives user input requesting information associated with funeral products, services and fees. The program associates the user input with a budget profile, home locator, or step-based parameter. Each parameter logically links to an information field stored within a database. A central web server retrieves information associated with the parameter for inclusion within a funeral arrangement.

Summary of

[0003] Upon the death of a family member, surviving loved ones must make a number of decisions in a relatively short time. Too often a bereaved loved one feels pressured and overwhelmed by memorial preparations. Exemplary memorial decisions encompass ceremony preferences, financial arrangements, casket or urn selections, etc. Other considerations relate to transportation, floral displays, as well as "personalizing" products and services. For instance, clients routinely customize materials, finishes, corner adornments and interiors of caskets to honor loved ones. Likewise, "memorial items" or keepsakes may be tastefully incorporated into aspects of a memorial service. While such services and personal touches facilitate the healing processes, they often represent difficult choices for bereaved loved ones.

Summary of Invention Paragraph - BSTX (8):

[0007] Some death care providers attempt to meet client insecurities and busy schedules by tapping into Internet resources. Commercial Internet applications have become ubiquitous in nearly every other industry, and funeral providers likewise recognize advantages inherent to the technology. For instance, digitized listings of funeral products and services are displayed on Internet web pages maintained by funeral suppliers and providers. Such web pages allow browsers limited exposure to select products and other aspects of a memorial process. Web pages can familiarize clients with select products and services prior to an arrangement conference. However, while they can

purchaser has provided some input to the merchant, which customizing the food product or creating a "new" or novel product. This input can be as limited as selecting a product to add to a conventional food product or as involved as communicating with the merchant, in response to the survey and/or food product suggestions customized for that purchaser over multiple iterative cycles of interaction, whether practiced over time through one or more purchase cycles. This is purchasing a food product "as is" which has been mass marketed to a range of consumers. This is also in contrast to a computer Web-based computer program having a user interface, that one or more 'off-the-shelf' products that are pre-existing products.

Detail Description Paragraph - DETX (30):

[0084] FIG. 1 is a simplified schematic diagram of an ordering and distribution system 100 for a particular type of food product, i.e., cereal. However, the system 100 described herein is virtually any type of food product. In this embodiment, comprised of a consumer location 102, interactive communication custom finishing facility 108, cereal base production facility 110, finishing-components suppliers 112 and, optionally, a shipping facility 114.

Detail Description Paragraph - DETX (32):

[0086] A consumer 115 in the consumer location 102 communicates with a merchant 116 or any type of terminal to directly contact a merchant 116. In one embodiment, the consumer 115 can communicate with the merchant 116 via e-mail (e-mail) or via accessing the merchant's website via an information-processing interactive communications link 104a which may be voice, data (whether or not graphic) or both, whether through wired or wireless communication. Communication using a website allows for the use of "real-time" interactive communication, providing for even greater and more convenient order customization, and is described in more detail below. Alternatively, the consumer 115 can use any type of mail service (e.g., United States mail service) 118, a conventional telephone 120, facsimile 122 or a private delivery service 124 as a means of user interface, as described in U.S. patent application, Ser. No. 09/596,275, supra. The mail service 118 can include use of a conventional catalog, brochure, order sheet, or any other type of printed information. The conventional telephone 120 can be a push-button phone system allowing entry of information and/or the merchant can provide a voice-activated phone system allowing the consumer to provide information by speaking into their conventional telephone. In one embodiment, the consumer receives information on a passive one-way device, such as a television or radio, and responds via any means described herein.

Detail Description Paragraph - DETX (51):

[0105] FIG. 2A is a block diagram of one embodiment of a customized food product ordering and distribution system 200. In this embodiment, the consumer in the consumer location 102 connects with the merchant server (i.e., server system) 106 through the information-processing interactive communications link 104a shown in FIG. 1, which is essentially a "real time" communications link when used for accessing a website, as described below. In this embodiment, the
